

# Castings

Portraits of people, places or events can be incorporated onto cast plaques using numerous techniques. The method selected depends upon the quality of the artwork or photograph, the budget and the preferred aesthetics of the plaque.

## Bas-Relief

Our sculptures model clay; a sand mold is made; a cast metal version is produced; the bas-relief portrait is hand finished.

## Etched Line Art

A line drawing is produced from a high quality photograph; the image is acid etched onto metal; the incised lines are color filled; the metal is sanded and lacquered.

## Photo Reproduction

A metal plate is exposed using a film negative produced from a photograph; the photograph becomes a permanent black image on the metal.

## Photocast

A photograph or drawing is turned into a low relief image; cast in bronze or aluminum; oxidized and hand finished.
